

Attention-Deficit/Hyperactivity Disorder

Frequently Asked Questions

It is the policy of Boynton Health that students requesting treatment for attention-deficit/hyperactivity disorder ADHD complete a comprehensive clinical and neuropsychological evaluation or provide documentation of diagnosis and treatment in childhood. This handout addresses many of the common questions that students have about this process. If you still have questions about how to arrange for evaluation and treatment of ADHD, please talk to your provider in the Mental Health Clinic or in the Primary Care Clinic.

What is a comprehensive ADHD evaluation?

A comprehensive ADHD evaluation is a neuropsychological evaluation generally performed by a Ph.D.-level licensed psychologist. After an initial interview (typically about 60 minutes in length), the psychologist decides upon a series of tests to investigate your symptoms. The evaluation may take from 4 to 8 hours and be completed in a single session or divided over two days. Some psychologists may set up a final meeting to review the results of the evaluation with you. Comprehensive testing must include at minimum intelligence testing (such as the WAIS-IV) and a computerized continuous performance test (such as the TOVA, IPA, or CPT). It usually takes 2 to 3 weeks to get results from your ADHD evaluation.

I had an ADHD evaluation done in my hometown. Can I submit that?

You are welcome to submit previous testing. It is helpful to get those records to your provider before your appointment. However, it is common for these evaluations to fall short of the standards that our guidelines require. Conversational interviews with your physician and/or taking a pencil/paper checklist test do not meet the requirements of a comprehensive ADHD evaluation. If your previous evaluation does not meet our criteria, your provider may have you meet with our clinic social worker for referral to a psychologist who performs comprehensive ADHD assessments.

I've been on ADHD medications for several years now. I need a prescription to continue my medications as soon as possible.

Adequate records or a comprehensive ADHD evaluation need to be submitted in order for our psychiatry staff to consider prescribing you medications. Please contact your previous prescriber to arrange for refills until the evaluation has been completed. A prescription from a licensed physician in another state can be filled by a Minnesota pharmacy but most ADHD medications cannot be called or faxed in. Instead have your out-of-state physician mail you the prescription.

What does an ADHD evaluation cost?

A comprehensive ADHD evaluation generally runs from \$1,400 to \$2,500. Many insurance companies do not cover the cost of ADHD evaluation. The Student Health Benefit Plan covers the comprehensive ADHD evaluation at 80 percent of cost. The Graduate Assistant Health Plan will pay for in-network testing with a \$10 co-pay.

I've completed my evaluation. What happens next?

Plan to follow up with your Boynton provider about 2 to 3 weeks after your evaluation. Our staff will review the ADHD evaluation and determine if it supports an ADHD diagnosis and treatment. If the evaluation does not support ADHD, other treatable conditions such as depression and anxiety may better explain your symptoms. Occasionally the evaluation may suggest that you would benefit from services that are not available in our clinic. In such cases the Boynton Health social worker can help you find community resources that meet your needs.
